QBSA Act Licence No. 1173314

Cost effective,
reliable, compliant,
professional,
quality assured &
licenced!

Getting it done right the first time, safely, professionally and cost effectively.

Rope 1 Maintenance Division offer cost effective, efficient professional trade applications to buildings and structures. Where in the past majority of external facade maintenance has been done with swing stages, these can be very costly, particularly when only doing minor repairs in multiple locations. The answer is rope access.

This also includes inspections, repairs and installations. By its very nature, this highly trained crew can establish access rapidly to structures which otherwise would be either too costly or totally inefficient. Our work methods have a built in rescue capacity in the unlikely event of this being required.

Our company are licensed under the QBSA in the classes of open builder low rise, waterproofing, carpentry and painting.

Access Maintenance Group (AMG) our parent company services a multitude of industries, with its speciality in maintenance and access. From inception in 1994 on the Gold Coast of Australia, our company director and his team have become known for the fulfillment of their mission statement "...quality, integrity and professional service at a competitive price." Our focus and core values are still the same, however now our services and impact reach far beyond this region.

AMG are currently the largest employers in Queensland in this specialist field.

Our team of professional technicians are trained in industrial rope access techniques. Our training is in accordance with either of two leading codes, Australian Rope Access Association (ARAA) or Industrial Rope Access Trade Association (IRATA). These two codes set a leading standard for work in industrial rope access.

In addition to the rope access training, we have tradesman with a variety of backgrounds including, glazing, painting, concreting and engineering. Although we specialise in the rope access work method, we have training in the use of EWP's (elevated work platforms, or 'cherry pickers'), and where required, swing stages.

Following is a list of our services provided. For further information on all AMG's services please take a moment to enjoy our website www.accessmaintenance.com.au

Window replacement, window sealing, concrete repair, joint sealing, general fitting and fixing, gutter replacement, sign removal or installation, core drilling, structural inspections including data collection, vegetation and bird control, decoration and promotion erection, confined space, rescue services hauling and lowering of items, painting and geotechnical stabilization. Height safety anchors, certification and compliance.

Call today! 1800 657 648.

JUST CAUSE HE SHOWS UP WITH A ROPE, DOESN'T MEAN HE SHOULD BE HANGING OFF YOUR BUILDING!!

Our industry, as with many, has its share of inexperienced, low quality operators in areas of OH&S, Quality and service. They are typically cheap, so if you are after the cheapest price, here's your guy, but if QA, OH&S and service rank highly, then you will find no better operation than rope 1. We can assist you in meeting your obligations as the 'controller of a premises' ensuring compliance, and taking the concerns out of this high risk work. our OH&S, Quality assurance manager can provide you with all the information you need.
