

# Compliance, quality assurance, service and value.

## What we do

AMG have developed out of a group of businesses which have successfully been servicing the Eastern Seaboard of Australia since 1994. Our training has allowed us to explore the most current and cost effective means of maintaining, inspecting, servicing, testing and training in a vast array of environments.

Key to the success of our company are our technicians and Management. With a commitment to OH&S and Quality Assurance with systems well beyond our competitors.

Technical training in specialist access methods, such as rope access, permit us to cost effectively service structures where other traditional methods can be cost prohibitive. In accordance with the 'heirachy of control' for working at heights we always evaluate every project from every access and cost alternative and use whichever access solution meets the requirements.

If height safety compliance, audits, proof load testing, or installations of any systems for safe work at heights are required, we have NATA accredited technicians available.

## Other services include:

Painting, window cleaning, inspection works, testing, sealing, waterproofing, welding, sign installation, rescue, hauling, pressure cleaning, confined space works, consulting, and training.

We are trade qualified, licensed, certified and professional.

## Where has service gone?

Remember when a service station was a "Service Station." You'd pull up in your car, a smile would welcome you and without a word from you would start to clean your windscreen, check you oil water and air, all the while filling your car with petrol. So where did the service go?

At Access Maintenance Group (AMG) it's all about service. We are not sales people, we are service people and we are here to service you!

AMG operate a 'Customer Care' program as part of our Quality Assurance. Our program is tailored to meet your needs, keep you informed and assist you in achieving the results you are after, not the other way around.

Here at AMG service is definitely at our core.

Access Maintenance Group (AMG) are innovators in access and maintenance. Servicing, industrial, commercial, construction, mining, marine and residential markets. We are a one-stop shop, providing excellence in quality, safety and service.
