Working at heights? Ensure you are competent!

AHSS now conducts Nationally Accredited Training to provide participants with the knowledge and skills required to work safely at height or depths of 2 metres or more.

Course

Working Safely at Heights (RHIOHS204A)

Duration

5- 6 Hours (nominal)

Target

Height workers and contractors

Course Profile

Nationally accredited training which provides participants with the knowledge and skills required to work safely at heights or depths (of 2 metres or more). The course content aligns to state legislation and the National Code of Practice of Prevention of Falls in General Construction. Content can be customised to suit specific needs of the industry/organisation.

This program also meets the training requirement for height safety theory/ operator (levels 1 & 2) under the recently revised AS/NZS 1891.4:2009.

On Completion

On successful completion of training & assessment, participants will receive a nationally accredited Statement of Attainment and wallet size plastic card.

Topic Overview

- Identify work safety requirements - legislation, codes & standards
- Prepare for work- risk assessment & levels of control, training & preparation of SWMS
- Access & install equipment - ladders, access/ egress, select the most appropriate fall-arrest systems & devices for the specific task.
- Perform work at height positioning of fall arrest systems, first response rescue/recovery, ascend/descend structure & demonstrate correct work position.
- Clean up and pack away. Assessment tasks- applying skills & knowledge.
